Employer-Reported Injuries and Illnesses in Georgia – 2016

Over 82,000 nonfatal workplace injuries and illnesses were reported among Georgia's private industry employers in 2016, resulting in an incidence rate of 2.7 cases per 100 full-time equivalent workers, the U.S. Bureau of Labor Statistics reported today. (See [table A](#).) Regional Commissioner Janet S. Rankin noted that Georgia was among seven states that had an incidence rate of total recordable cases (TRC) similar to the national rate of 2.9. (Georgia is 1 of 41 states and the District of Columbia for which statewide estimates are available. See [Technical Note](#) at the end of this release for more information about the survey.)

Georgia's findings from the 2016 Survey of Occupational Injuries and Illnesses include:

- TRC incidence rates in private industry ranged from 0.8 in financial activities to 3.8 in education and health services. (See [table 1](#).)
- Two supersectors, with about 40 percent of private industry employment, accounted for 51 percent of the occupational injuries and illnesses: trade, transportation, and utilities; and education and health services. (See [table 2](#).)
- In private industry, the TRC injury and illness incidence rate ranged from 1.7 for small establishments (those employing fewer than 11 workers) to 3.5 for small mid-size establishments (those employing between 50 and 249 workers). (See [table 3](#).)
- Georgia's private industry TRC rate of 2.7 in 2016 compared to the rate in 2015. (See [table 4](#).)

Table A. Number and rate of nonfatal occupational injuries and illnesses in private industry, United States and Georgia, 2016

Characteristic	United States		Georgia	
	Number (in thousands)	Rate (per 100 workers)	Number (in thousands)	Rate (per 100 workers)
Total cases	2,857.4	2.9	82.3	2.7
Cases with days away from work, job transfer, or restriction	1,547.8	1.6	44.5	1.5
Cases with days away from work	892.3	0.9	25.1	0.8
Cases with job transfer or restriction	655.6	0.7	19.5	0.6
Other recordable cases	1,309.5	1.3	37.7	1.3

Private industry injury and illness case types

Of the 82,300 private industry injury and illness cases reported in Georgia, 44,500 were of a more severe nature, involving days away from work, job transfer, or restriction—commonly referred to as DART cases. These cases occurred at a rate of 1.5 cases per 100 full-time workers. Fifty-six percent of the DART cases in Georgia were incidents that resulted in at least one day away from work, compared to 58 percent nationally.

Other recordable cases (those not involving days away from work, job transfer, or restriction) accounted for the remaining 37,700 cases in Georgia, at a rate of 1.3. In comparison, the national rate for other recordable cases was also 1.3.

In Georgia, the financial activities supersector had a significant decline in both the TRC incidence rate and in the DART incidence rate. No other private industry supersector had a significant change in either the TRC incidence rate or the DART incidence rate from the previous year.

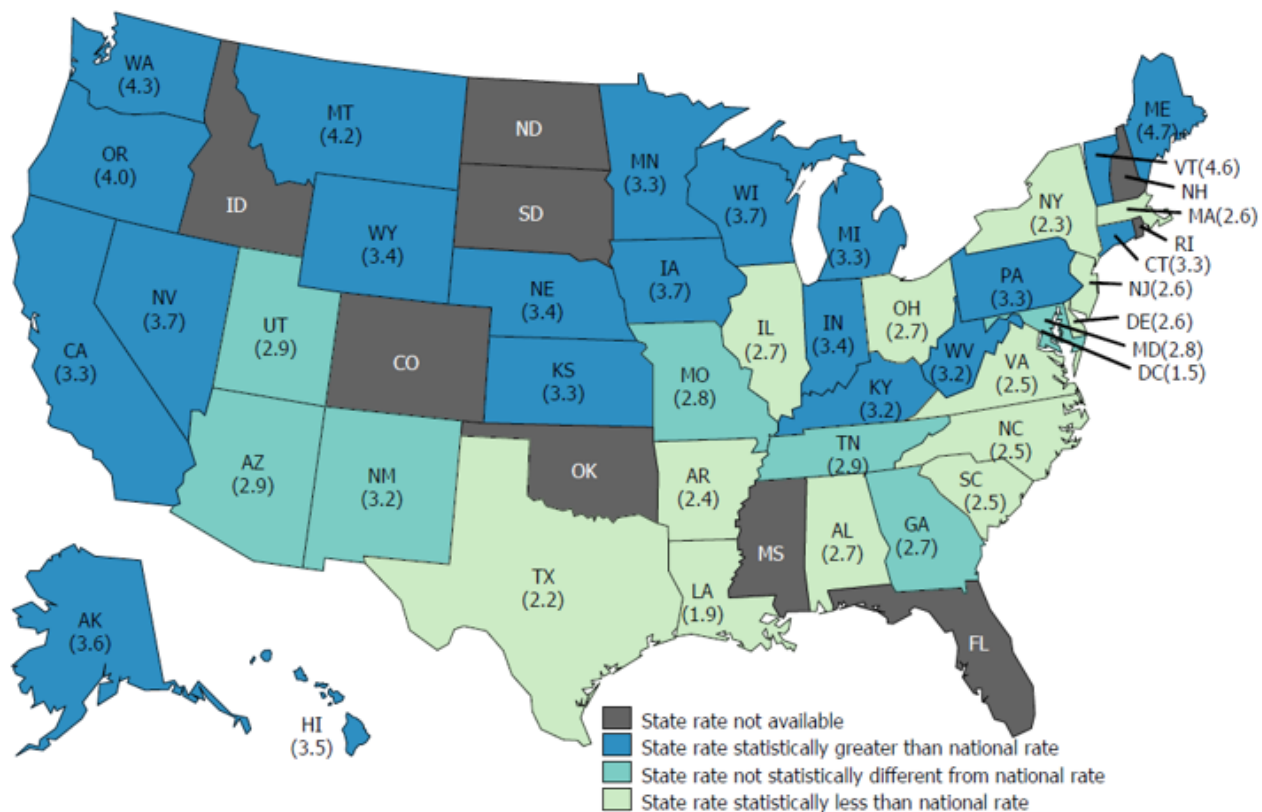

In 2016, 77,900 (94.7 percent) of private industry recordable injuries and illnesses were injuries. Workplace illnesses accounted for an additional 4,400 recordable cases. Three categories—skin disorders, hearing loss, and respiratory illnesses—accounted for 39 percent of the occupational illnesses in Georgia. Nationally, these three categories amounted to 36 percent of the work-related illness total.

State estimates

Private industry and public sector estimates are available for 41 participating states and for the District of Columbia for 2016. The private industry injury and illness rate was statistically higher in 21 states than the national rate of 2.9 cases per 100 full-time workers, lower in 13 states and in the District of Columbia, and not statistically different in 7 states. (See [chart 1](#).)

Six states—Alabama, Indiana, Kentucky, Missouri, Tennessee, and Utah—reported declines in their TRC rate from a year earlier. Kansas was the only state in which the rate rose from the previous year. Differences in the industry composition in each state account for some of the differences in injury and illness incidence rates across states.

Changes to the National News Release Format

Beginning with the 2016 reference year, the SOII will issue a single release of national data. The national release includes industry counts and rates, along with case circumstances and worker characteristics for cases requiring days away from work. In previous years, these data were released separately.

Technical Note

The Survey of Occupational Injuries and Illnesses (SOII) is a Federal/State program in which employer's reports are collected annually from approximately 200,000 private industry and public sector (State and local government) establishments and processed by State agencies in cooperation with the Bureau of Labor Statistics. Summary information on the number of injuries and illnesses is transcribed by these employers directly from their recordkeeping logs to the survey questionnaire. The questionnaire also asks for the number of employee hours worked (needed in the calculation of incidence rates) as well as its annual average employment (needed to verify the unit's employment-size class).

Occupational injury and illness data for establishments in coal, metal, and nonmetal mining industries and for railroad activities are provided by the Department of Labor's Mine Safety and Health Administration (MSHA) and the Department of Transportation's Federal Railroad Administration (FRA), respectively. The SOII excludes all work-related fatalities as well as nonfatal work injuries and illnesses to the self-employed; to workers on farms with 10 or fewer employees; to private household workers; to volunteers; and to federal government workers.

Injuries and illnesses logged by employers conform to definitions and recordkeeping guidelines set by the Occupational Safety and Health Administration (OSHA), U.S. Department of Labor. Under OSHA guidelines, nonfatal cases are recordable if they are occupational injuries or illnesses which involve lost work time, medical treatment other than first aid, restriction of work or motion, loss of consciousness, or transfer to another job. Employers record injuries separate from illnesses and also identify for each whether a case involved any days away from work or days of restricted work activity, or both, beyond the day of injury or onset of illness.

Survey estimates are based on a scientifically selected sample of establishments, some of which represent only themselves, but most of which also represent other employers of like industry and workforce size that were not chosen to report data in a given survey year.

The incidence rates presented in this release represent the number of injuries and/or illnesses per 100 full-time equivalent workers and were calculated as:

$(N / EH) \times 200,000$ where,

N = number of injuries and/or illnesses

EH = total hours worked by all employees during the calendar year

200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year)

Background and methodological information regarding the BLS occupational safety and health statistics program can be found in Chapter 9 of the BLS Handbook of Methods at www.bls.gov/opub/hom/pdf/homch9.pdf.

Additional occupational injury and illness data are available from our regional web page at www.bls.gov/regions/southeast. Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202)-691-5200; Federal Relay Service: (800)-877-8339.

State government	-	-	-	-	-
Local government.....	-	-	-	-	-

Footnotes:

(1) Excludes farms with fewer than 11 employees.

(2) Data for mining (Sector 21 in the North American Industry Classification System, 2012 edition) include establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in oil and gas extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore estimates for these industries are not comparable to estimates in other industries.

(3) Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

(4) Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

Note: Dashes indicate data not available.

Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as: $(N/EH) \times 200,000$ where: N = number of injuries and illnesses; EH = total hours worked by all employees during the calendar year; and 200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).
